

JURONG FROG FARM

Jurong Frog Farm at a Glance

The Jurong Frog Farm is another attraction in the Kranji Countryside. A visit to the Farm will be a brief trip since it is not very large, but we suggest visiting only if your children are frog fans. Your kids will enjoy feeding the frogs with the feed that may purchased at the office for \$1 a pack.

The farm sells an educational booklet called "A Frog's Blog" for those visiting with children and want to provide more factual information on this amphibian.

The Jurong Frog Farm is the only frog breeder in Singapore and mainly rears American bullfrogs. They also have other livestock, including eel and fish. It is opened everyday from 7am to 6pm and is located at 56 Lim Chu Kang Lane 6.

Tip: Make sure your kids empty their bladders or bowels before you drop in at the Farm. There is a restroom on the premises but we advise that you use it only for emergencies.

1. Life Cycle of a Frog Live!

The Farm only conducts guided tours for groups of 40 or more. It's not really crucial to join the tour since the Farm is easy to navigate. Simply start your visit at the office where you can see live, the life cycle of a frog in various containers. Purchase "A Frog's Blog" at \$2 if you need help explaining the life cycle to your child. There is a fully illustrated description inside, plus frog facts, activity pages including a frog origami, and yummy frog leg's recipes.

2. Essential Essence

A specialty of the Jurong Frog Farm, the farm produces and sells essence of bullfrog with ginseng and cordyceps. According to ancient Chinese beliefs, bullfrogs have cooling characteristics and keeps one's stamina in peak condition. The essence is extracted using advanced technology and modern instruments to separate and discard all the fat and cholesterol. In addition, the essence does not contain preservatives, artificial colouring or flavouring. You can purchase the packaged essence for \$20 at the farm.

The farm also sells Snow Frog Jelly (Hashima) that provides both nutritional and health benefits.

You can also take home a pack of American Bullfrog Legs to cook at home with one of the recipes in the Frog Blog.

3. Sea of Frogs

Look into the holding area for market size frogs and you'll see a sea of black. The croaking is loud and distinct. According to staff at the Jurong Frog Farm, these bullfrogs are fed only specially imported high-protein feed and reared with fresh running water, thus ensuring the best quality frogs.

5. Male and Female

Green and black, which frog is male and which is female? If you guessed green for male, you are right. Why? Because male frogs need to attract the females for mating!
